DENTAL PROCEDURES

The quick information resource for patients

This smile can be yours !!!

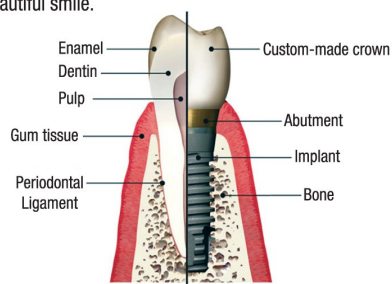

SERVICES WE OFFER :

COSMETIC DENTISTRY

It is not difficult to have that charming smile you always wanted!

Cosmetic Dentistry relates to making some acceptable changes by way of tooth whitening, tooth colored fillings, veneers, thinners, crowns and implants to make you look younger and better with beautiful smile.

DENTAL IMPLANTS

Dental implant feels like your natural teeth !

Dental implants are artificial tooth root replacements that are used as a part of prosthetic (artificial replacement) dentistry in order to replace missing teeth or ill-fitting dentures.

ROOT CANAL TREATMENT

Get painless root canal treatment at Lifeline designed by experts !

Root canal therapy (RCT) is the best treatment to retain the original teeth which are painful, badly decayed, partially broken and infected. A root canal treated tooth serves its purpose and function just as a healthy tooth.

PROSTHETIC DENTISTRY

You can restore your lost teeth !

Loss of teeth is made good by installing a removable denture whether complete or partial and fixed bridges made of crowns whereby chewing efficiency is restored.

PEDIATRIC DENTISTRY

Make sure your child grows up to have a healthy set of teeth and no fear of dentists !

Dental health experts say a lifetime of strong healthy teeth begins with a child's first visit to the dentist. And they say it should be scheduled even when children still have their baby teeth. There are a number of problems that affect the oral health of children, including tooth decay, thumb sucking, tongue thrusting, lip sucking and early tooth loss. Even though baby teeth are eventually replaced with permanent teeth, keeping baby teeth healthy is important to a child's overall health and well-being.

ORTHODONTIC TREATMENT

Align your teeth !

Correct alignment of teeth and their position with regard to jaw and face increases efficiency and longevity of your teeth and boosts your confidence. Orthodontics is the dental practice of straightening and realigning teeth for maximum performance and aesthetics. Orthodontic braces are often used in conjunction with other orthodontic appliances to widen the palate or jaws, create spaces between teeth, or otherwise shape the teeth and jaws.

TOOTH JEWELLERY

Get shiny smiles using tooth jewellery!

Have a sparkling smile at Lifeline with these tooth jewels. It can be attached quite easily in not more than 10 minutes. You can choose from wide range of varieties. These jewels are removable, affordable & painless.

PERIODONTIC TREATMENT

Study shows 90% adult population suffers from some gum problems !

Gum or periodontal disease is an inflammatory condition affecting the tissues surrounding a tooth. This is the leading cause of tooth loss, perhaps even more than dental caries in adult Indians. This can be protected by various gum treatment and surgeries like Gingivectomy, Flap, Curettage and Bone graft.

CONSERVATIVE TREATMENT

A stitch in time saves nine !

A dental filling is a type of conservative restorative treatment used to repair minimal tooth fractures, tooth decay or otherwise damaged surfaces of the teeth. Dental filling materials include pits and fissure sealants, composite, porcelain and silver amalgam. These may be used to even out tooth surfaces for better biting or chewing.

SURGICAL TREATMENT

It is when the time gets too tough, we gently operate you to comfort !

Surgery is required for a number of cases in which other treatments prove insufficient. These include but are not limited to removal of the wisdom molar, treatment of fracture of the jaw, alignment of the jaws both maxillary and mandibular, remolding of the alveolar ridges, periodontal surgeries, apicectomy, removal of cysts, remolding of gums, frenectomy, treating tongue ties, sinus lift, bone graft, etc.
